

Project 3 Showcase Guidelines

At the end of each batch, associates are tasked with completing a sprint on an internal Revature enterprise-level application. Each batch will get a chance to showcase their work in front of the entire company. The presentation should be around 25 to 30 minutes in order to leave room for questions at the end, depending on the size of the batch. To ensure the success of project presentations, please adhere to the following instructions:

- Dress in business professional attire
- Must have a slideshow presentation with the following:
 - Use a consistent Revature format across slides
 - Introduction to business use case of the project
 - Present the features or requirements that your team completed
 - Talk about major technologies used in the project, design patterns, and overall architecture considerations
 - For full-stack batches, must present relevant sprint metrics, including burndown chart, test coverage, build statistics (total builds, build stability, etc)
 - Discuss outstanding defects, specifically new or critical defects introduced
 - Discuss project management techniques and tools used
- Introduce yourself before speaking
 - Host transitions
- Include a Live Demo
 - Person conducting demo does not narrate, another person should assist to explain what is happening in the demo
 - Must cover all new features implemented in the sprint, existing features are optional to demo
